

Patient Intake Report

Patient: Priya Menon **Age:** 34 **Sex:** F **Date:** 2026-07-22

Chief Complaint

Two weeks of low mood, poor sleep, and low energy, plus intermittent mild tension headaches.

History of Present Illness

Patient reports persistent low mood, anhedonia, difficulty sleeping (early morning waking), and low energy for approximately two weeks, coinciding with a recent job loss. Denies suicidal ideation or intent, denies psychotic symptoms. Also reports intermittent mild, bilateral, band-like headaches occurring a few times per week, relieved with over-the-counter ibuprofen, no red-flag features (no worst-of-life severity, no neuro deficits, no vision changes).

Relevant Medical History

No prior psychiatric history. No prior significant headache history. No current medications.

Vitals

BP 122/78, HR 76, RR 16, SpO2 99% on room air, temp 36.8C.

Physical Exam Notes

Alert and oriented, cooperative, flat affect, no psychomotor agitation or retardation. Neuro exam grossly intact, no focal deficits. No signs of head/neck pathology on palpation.
